OpenAPI Backend
Yup
Zod
REST
RavenDB
Cypress
NodeJS
MongoDB
Canva, Figma
Capacitor
Team collaboration
Planning
Concept development

CURRENTLY LEARNING

React native with Expo
Laravel & PHP

PROFILE

A results-oriented Front End Developer with over 6 years of experience, specialising in building unique SaaS products for early-stage startups.

I'm a product-minded problem-solver, consistently delivering customer focused solutions that has led to an increase of usage and positive interactions with our software - most recently by reducing load time on our main dashboard from 6 seconds to under 2 seconds.

I am passionate about understanding customer problems and continuously learning new technologies to deliver effective solutions. Being self-taught, my passion for coding is intrinsically linked to continuous learning. I'm dedicated to mastering new technologies and evolving my skills to stay at the forefront of development and consistently build impactful products.

I'm eager to join a dynamic team where I can drive personal and professional growth, offering the freedom to contribute fresh ideas and making a significant contribution within a collaborative team.

WORK EXPERIENCE

FRONTEND SOFTWARE DEVELOPER

Guestwise | Jan 2025 - present

Working as Front End Software Developer within a fast pace start up, I'm required to wear many hats. Entering a new industry (hospitality marketing) has allowed me to harness my skills as a product-minded developer, having a greater reach to new customers with a unique set of problems.

My daily work focuses on surfacing key metrics that our customers use to inform and drive their marketing strategies. By ensuring accuracy of metrics, I am able to build trust with our customers and increase stickiness with our product - which built in PHP and Laravel.

I also work closely on a React Native app used in over 350 restaurants across the UK. I am currently focusing on improving our release process to shorten the delivery loop from 3-5 days to 1hr by using OTA updates via Expo.

Through my code & custom built activations, our customers are able to make strategic marketing decisions that has unlocked over 24% incremental conversions, leading to increased bookings and additional revenue for their brands.

FULLSTACK SOFTWARE ENGINEER

Hectare | Sept 2022 - Dec 2024

Following a promotion in December 2022, I took in further responsibility within the team. This included bringing forward new ideas and executing them to ensure a stable platform as the product usage continues to grow. An example of this was 'Storage locations' that allows farmers to see what they have in each store, the capacity & when movements are occurring - which is normally filled out in multiple spreadsheets.

I had built a strong relationship with stake holders with the company, collaborating to solve complex issues the users face on a regular basis. This in turn has helped me build knowledge on problem solving and creating simple solutions with code (primarily Vuejs with Typescript connecting to OpenAPI backend).

In this time, I also relocated to Australia for 4 months, effectively communicating & working across timezones with my team back in the UK.

EDUCATION

FIREBRAND APPRENTICESHIP

Level 4 Software Development Diploma

Microsoft Specialist: Programming with HTML5 with Javascript and CSS3

MTHTML5 -MTA Database Fundamentals
2019 - 2020

ANDOVER COLLEGE (A LEVELS)

B (Psychology), C (Law), D (Traditional mathematics)
2016 - 2018

FULLSTACK SOFTWARE DEVELOPER

Hectare | Sept 2021 - Sept 2022

Eager expand my knowledge, I joined the Argi-Tech SAAS start up in September 2021. In this role, I learnt to work at a fast pace, delivering high quality features to a green field user base. This required strong communication and prioritisation skills to achieve the best product within strict and short timeframes.

Within this role, I transitioned my knowledge to work with NuxtJS on Front end, and MongoDB with Express on the Back end.

During this role, I found I deeply enjoy a fast paced environment that allows for ambitious thinking & exploring new ideas/tools.

I worked along side an incredibly talented group of engineers who encouraged my out-the-box thinking & distilled best practices that I continue to use in my career.

JUNIOR SOFTWARE DEVELOPER

Simplyhealth | July 2020- Sept 2021

Following the completion of my apprenticeship, I became a Junior Software developer. This role entails converting requirements from stakeholders around the business into highly functional working code. I contribute to BAU tasks such as improving the functionality within Simplyhealth's CMS (AEM), increasing Accessibility and functionality throughout our web estate and building projects to the highest quality using SOLID and DRY principles. I am also the Lead developer on Interaction studio, which allows our marketing team to provide personalised journeys throughout the customers experience with Simplyhealth.

APPRENTICE SOFTWARE DEVELOPER

Simplyhealth | Sept 2019- July 2020

I completed my apprenticeship with Firebrand in September 2020, following 2 exams (MTA Database Fundamentals, MTHTML5 Microsoft Specialist: Programming with HTML5 with Javascript and CSS3) as well as meeting a list of criteria on projects within my work-place.
