Git (6yrs),
MongoDB (3yrs),
Canva, Figma (4yrs)
Team collaboration
Planning
Concept development

PROFILE

As a self-taught developer with a passion for problem solving & over 6 years experience in Front End Development, primarily working in building unique SASS products for early stage startups.

I am looking for opportunities that enable personal and professional growth within a team & freedom to bring new ideas to the table

WORK EXPERIENCE

FRONTEND SOFTWARE DEVELOPER

Guestwise | Jan 2025 - present

I joined Guestwise in January 2025, looking for a fresh opportunity to grow within a new industry. It has allowed me to harness my skills as a product-minded developer, as well dive into with a new tech stack (PHP, Laravel, Inertia).

Being in a fast paced startup, my role is to wear many hats. This has given me the flexibility to learn new tools, suggest different methods for working (i.e using story points for more effective estimates) to grow more effective as a team, a company, and as a developer.

Changing industries has given me the chance to have greater reach to customers & develop tools through code that have a real impact on their businesses.

I primarily work on developing a React Native app, used in over 300 restaurants across the UK. My focus is also on our portal (written in PHP, Laravel, Inertia and ReactJS), displaying key metrics to help inform marketers on their next strategy.

FULLSTACK SOFTWARE ENGINEER

Hectare | Sept 2022 - Dec 2024

Following a promotion in December 2022, I took in further responsibly within the team. This included bringing forward new ideas and executing them to ensure a stable platform as the product usage continues to grow. An example of this was 'Storage locations' that allows farmers to see what they have in each store, the capacity & when movements are occurring - which is normally filled out in multiple spreadsheets.

I have built a strong relationship with stake holders with the company, collaborating to solve complex issues our users face on a regular basis. This in turn has helped me build knowledge on problem solving and creating simple solutions with code (primarily Vuejs with Typescript connecting to OpenAPI backend).

In this time, I also relocated to Australia for 4 months, effectively communicating & working across timezones with my team back in the UK.

FULLSTACK SOFTWARE DEVELOPER

Hectare | Sept 2021 – Sept 2022

Eager expand my knowledge, I joined the Argi-Tech SAAS start up in September 2021. In this role, I learnt to work at a fast pace, delivering high quality features to a green field user base. This required strong communication and prioritisation skills to achieve the best product within strict and short timeframes.

Within this role, I transitioned my knowledge to work with NuxtJS on Front end, and MongoDB with Express on the Back end.

During this role, I found I deeply enjoy a fast paced environment that allows for ambitious thinking & exploring new ideas/tools.

I worked along side an incredibly talented group of engineers who encouraged my out-the-box thinking & distilled best practices that I continue to use in my career.

JUNIOR SOFTWARE DEVELOPER

Simplyhealth | July 2020– Sept 2021

Following the completion of my apprenticeship, I became a Junior Software developer. This role entails converting requirements from stakeholders around the business into highly functional working code. I contribute to BAU tasks such as improving the functionality within Simplyhealth's CMS (AEM), increasing Accessibility and functionality throughout our web estate and building projects to the highest quality using SOLID and DRY principles. I am also the Lead developer on Interaction studio, which allows our marketing team to provide personalised journeys throughout the customers experience with Simplyhealth.

APPRENTICE SOFTWARE DEVELOPER

Simplyhealth | Sept 2019– July 2020

I completed my apprenticeship with Firebrand in September 2020, following 2 exams (MTA Database Fundamentals, MTHTML5 Microsoft Specialist: Programming with HTML5 with Javascript and CSS3) as well as meeting a list of criteria on projects within my work-place.
